Results

? Candidate

0% confidence

Inputs Used

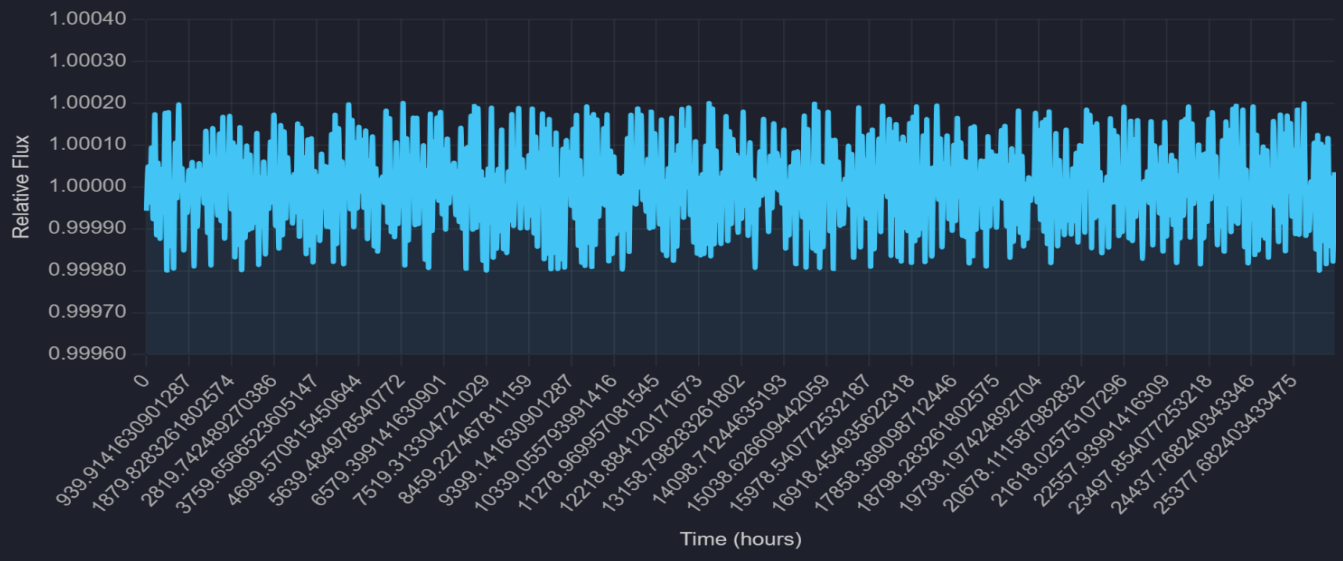

Planet Radius (Earth radii)	1
Distance (AU)	1
Orbital Period (days)	365
Star Radius (Solar radii)	—
Transit Duration (hours)	12.973312740878
Transit Depth (fraction, derived if missing)	8.4167999326656E-5
Semi-major axis a (AU)	0.99954363946528
Stellar Temperature (K)	—

Derived / AI Metrics

Transit Depth (AI or derived)	8.4167999326656E-5
SNR (AI, approx.)	5
Semi-major axis a (AU)	0.99954363946528

The parameters suggest a potential exoplanet, but the low transit depth and the need for further observations to confirm the signal indicate it is classified as a candidate rather than a confirmed exoplanet.

Simulated Light Curve (time in hours)
